

ABSTRACT

A method for the transmission of messages between at least one main station and a terminal via a telecommunications network, and a matching device for it. The message exchange is controlled by matching device between the at least one main station and terminal as a function of at least one input from terminal or from the at least one main station. The matching device includes at least one interface to the main station, and one interface to the terminal. Furthermore, a storage device is provided for storing at least one input from terminal or from at least one main station for controlling the message exchange between the at least one main station and the terminal. Furthermore, a control unit is provided which controls the message exchange as a function of the at least one input.
